Exceptional tightness

New GEALAN sliding system

More living
spaces

QUALITY OF LIFE WITHOUT COMPROMISE

NEW GENERATION OF SLIDING ELEMENTS

The living space is expensive and should therefore be used in an optimal way. For the first time, the GEALAN sliding system combines the space-saving comfort of sliding systems and the exceptional tightness. This is made possible through the interplay of new fittings, innovative profile geometry and optimised sealing.

Easy to combine

Sliding windows and sliding doors fit nicely into the façade thanks to the diversity of decorative films.

Easy sliding – secure closing

Comfort in previous sliding windows was often put above tightness. With the improved closing mechanics in the new GEALAN sliding system, this is a thing of the past.

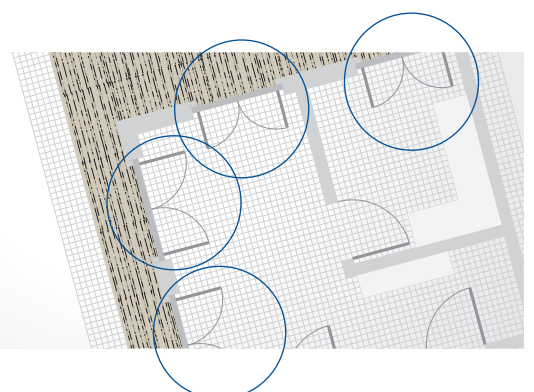

Saves space and opens up a room

Sliding elements offer a great advantage to the living space. You no longer need space to open windows and doors. So the living space right by the window can be used as well.

When designing a building, sliding elements offer a huge potential for creating useful open spaces.

Simply tight under wind and adverse weather conditions

The all-round sealing contour ensures the perfect tightness of a closed window and protects against outdoor factors.

Smooth sliding
Space-saving perfection
Wind protection
Rainwater protection
Reliable heat insulation
Optimum noise protection
Elegant, restrained design

Top-quality elements

Advanced structural parts perform their work unobtrusively. Special roller systems and the unique closing technology ensure smooth control and perfect tightness.
